Adjustable monitors that are impressive even when they disappear without a trace

As table or monitor, function follows form. And form and function should change along with your needs. It's a simple idea but its genius lies in the details:

rotatable (**VERSIS**), closable (**MODIS**), vertically adaptable (**CONVERS**). Incorporate all of your complex demands into one comprehensive plan: for space in which people can meet and communicate effectively; for intuitive technology that speeds up and ably supports the decision making process; for selective control of a room's technology; for the greatest amount of security and flexibility in the furnishings; for beauty and quality in design and workmanship.

Our solution – adjustable monitors that are impressive even when they disappear without a trace. But this feature is not merely for show. It is a functionality that provides more efficiency and enhances decision making by making more use of space and time.

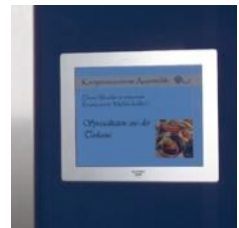

- Choose between 15, 17, and 19 inch flat screen – or larger
- Micro-polished and anodised aluminium
- Frames and housing in desired colours, optional (RAL, powder coated)
- 4 mm interference anti-reflecting glass
- VGA interface for connection to all of the standard systems available on the market today
- Can be individually integrated or combined in a network
