

EK2000

Modular Keyboard

Control up to 6 Workstations with one single keyboard and mouse.

Keyboards can be linked together in order to share Workstations between two users.

Keypads and other modules can be added to customize keyboard.

Highlights

- **Control up to 6 Workstations with one sole keyboard and mouse**
- **Workstations and services can be shared between 2 Keyboards resp. users with a simple connection**
- **Functionality extendable with additional modules and keypads**
- **Wide range of emulations supported: Bloomberg, SUN etc.**

Advantages

EK2000 Keyboard enables you to control up to 6 workstations with one sole keyboard and mouse.

Wide range of keyboard types supported: PS2, USB, Bloomberg, SUN etc..

Application licences and Workstations can be shared between two or even more keyboards.

Functionality of the WEY Keyboard can be extended with accessories such as a Video Deskswitch or Video Distributor in order to control the handling of video signals from your workstations to the monitors.

Features

Select PC or Service

Only one keystroke is necessary to select one of the local workstations.

Share workstations

Two keyboards linked together allow sharing several workstations between two users.

Extended sharing

With a WEY Microsystem or Deskswitch KMVA 4x4/8x8, up to 8 workstations can be linked together resp. shared by 8 users.

Video signal of connected workstations is distributed to each desk.

Audio

Audio signal from the workstations can be routed to 2 integrated speakers or to external speakers (connected to keyboard).

Modules

Keyboard's functionality can be enlarged by several accessories like keypads, Video Deskswitches, etc.

Keyboard Accessories

Keyboard can be customised with several accessories to suit your needs:

Keypads

Several Keypads available (Bloomberg, SUN, etc.).

Connector box

Central interface to connect workstations and other devices to keyboard.

Video Deskswitch

Extend keyboard functionality by other modules, e.g. 2:1 Video Deskswitch.

Deskswitch / Microsystem

Extend sharing range from 2 users to max. 8 users with our Deskswitch.

Sharing

Two users can share their workstations by linking keyboards together. Each user can control his dedicated workstation and provided it is not in use, a shared PC (e.g. Reuters Dealing) resp. services of another user.

In conjunction with a WEY Microsystem you can share a max. of 8 workstations.

Extended functionality

WEY provides a wide range of accessories to extend the number of applications the keyboard can deal with. You can also combine the keyboard with a local Video Deskswitch in order to reduce the number of screens on your desk.

Thanks to the keyboard's open architecture, keys can be customised individually for special purposes and emulations.

Pooling System

In combination with a WEY Pooling System you can select further dedicated, slaved or shared services located in the System room.

Keyboard-, mouse-, video- and audio links are connected to the Pooling System, where you can select required services.

Connector Box

Keyboard-, mouse- and audio links are connected to a central point - the Connector Box.

There are PS/2, USB and serial interfaces to support different types of devices.

Keyboard settings can be saved in Connector box. Setup can be uploaded from Connector box, if a keyboard is damaged.

Configuration

Keyboard can be configured by using an external- or the built in software.

Clean up your trader's desk by replacing multiple keyboards ...

... with **one** WEY EK2000 keyboard.
