

WEY RAY 06

Modular Keyboard

Control up to 6* Workstations by one single keyboard and mouse.

Control and share a wide range of computers from multiple desks within a Allocation System.

Keypads and other modules can be added to customize the keyboard.

Highlights

- **Color display**
- **Personalized information on the color display**
- **TV Video Signal can be shown on the color display**
- **Multiple interfaces for different environments**
- **Control up to 6* Workstations over one sole keyboard and mouse**
- **Functionality extendable with additional modules and keypads**

Advantages

With the multifunctional Keyboard "WEY RAY 06" you are able to control directly up to 6* workstations from one single keyboard and mouse.

A wide range of keyboard types such as standard PS2, USB, Reuters Dealing, EBS, SUN etc. are supported.

Workstations and application licenses can be shared between two or even more keyboards.

Functionality of the WEY Keyboard can be extended with accessories such as a Video Deskswitch or Video Distributor to control the video signals displayed on monitors at the desk.

In conjunction with a WEY Allocation System you can select and control numerous dedicated, slaved or shared services (Dealing, EBS, TV etc.).

Features

Select PC or Service

Only one keystroke is required to select one of the local workstations.

Share workstations

Link two keyboards together and share several workstations between 2 users.

Extended sharing

With a WEY Microsystem or Deskswitch KMVA 4x4/8x8 up to 8 workstations can be shared by 8 users.

Videoswitch control

Control several services like Reuters Dealing, EBS, TV and in-house PCs within a Allocation System.

Audio

Audio signal can be routed to two integrated speakers, to external speakers or a headphone set connected to the keyboard.

Programmable function keys

Keyboard has 24 function keys that can be individually programmed.

An integrated LCD display shows the corresponding legend of the function keys. Keys can be programmed to send commands, key codes or strings.

Modules

The keyboard's functionality can be extended by several available accessories such as keypads, video desk switches, etc.

Keyboard Accessories

Keyboard can be customized with certain accessories to your needs:

Keypads

Several Keypads are available (SUN, Bloomberg, etc.).

Connector box

Central interface to connect workstations and other devices to keyboard.

Video desk switch

Extend keyboard functionality by other modules like 2:1 Video Deskswitches.

Deskswitch / Microsystem

Extend sharing range from 2 users to a maximum of 8 users with a Deskswitch.

Other modules

Extend keyboard functionality by other modules (e.g. card reader). Further modules can be developed on request.

* Future Firmware upgrade will allow up to 8 Workstations

Connector Box

The Workstation's keyboard, mouse and audio links are connected to a central point: The Connector Box.

Connector Box has PS/2, USB and serial interfaces to support different types of devices.

Settings of the keyboard can be saved in Connector Box. In case a keyboard is damaged, setup can easily be uploaded from the Connector Box.

Sharing

By linking two keyboards together, you can share workstations between two users. User can control his dedicated workstation or a shared PC like e.g. Reuters Dealing, which is not in use by someone else.

In conjunction with a WEY Microsystem it's possible to extend the sharing possibility to a maximum of 8 keyboards.

Extended functionality

WEY provides a wide range of accessories to extend the range of application the keyboard can handle.

Video Deskswitches for example manage the Video signals of your Workstation and reduce the number of screens at your desk.

The keyboard's open architecture enables you to customize its keys individually for special purposes and emulations.

Video Switch System

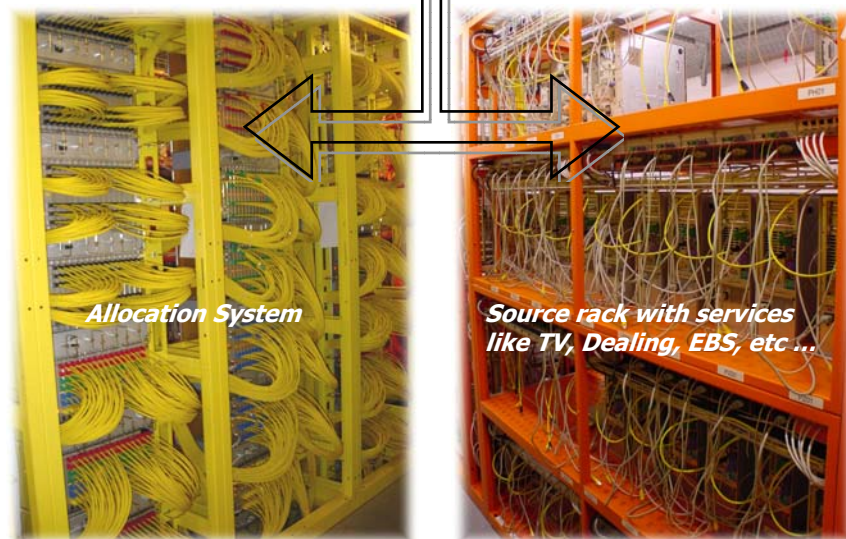

In conjunction with a WEY Video Switch System you can use further dedicated, slaved or shared services such as Dealing, EBS, TV etc.

Services resp. PCs are located in a system room. Keyboard, mouse, video- and audio links are connected to the Video Switch System.

With the **free seating** concept, users can logon to the system from any desk where a WEY Keyboard and Allocation System connection is installed.

User's service access rights (e.g. view only, shared or dedicated access) are defined in the user profile.

Example of a Trader's Desk with a WEY RAY keyboard controlling local workstations and computers ...

...which are connected to a WEY Allocation System.
